Preface

Since P650H-31 3.40(IS3) firmware supports many
new features, the code size increases and exceeds
the memory allocated for FTP and Web. This firmware
update issue is listed in release note.

===
Known Issues:

Update firmware issue :
a.   Update firmware by FTP and Web: Can¡¦t update
         firmware from 3.40(IS.0), 3.40(IS.1) and 3.40
         (IS.2) to 3.40(IS.3) by FTP and Web
b.   Only update firmware by console
===

We propose an alternative (by FTP twice) to help
ease the inconvenience of the firmware update by
console.

Please also note that because the data structure of
IS3 is also increased to support more function, user
may not be able to keep old configuration. Please
reset to factory default and proceed firmware upgrade
task. After f/w upgrade complete, please reconfigure
P650H.

Below is the procedure:
1. Prepare a computer with FTP client
2. Extract the firmware package (.zip) to your local
   computer
3. Reset P650H to default configuration. (Press reset
   buttom. Please refer to user's manual for more detail.)
4. Run FTP and load the file (340IS2_100103.bin) to
   P650H first
5. After P650H completes f/w upgrade and reboots, then
   reload the IS3 f/w (340IS3C0.bin)
6. P650H f/w upgrade complete and reconfigure again
